IEEE CIS PRESENTS

OFFICIAL AGENT RULEBOOK

// IMF DIRECTIVE 001-A

MISSION: IMPOSSIBLE

MAKE THE IMPOSSIBLE
WORK

Team Size: 3 - 4 Members
DATE: 9TH OCTOBER 2026

CLASSIFICATION: TOP SECRET // DISAVOWAL ACTIVE

IEEE
Computational
Intelligence
Society

date: 9th october, 2026

timings: 9:30 am – 1:30 pm

venue: ssn college of engineering

squad size: 3-4 operatives

field support / inquiries:

harini narasimhan: +91 80720 01636

registration fee:

per head ₹25 (cis members)

₹35 (non-cis)

SECTION 1: CORE PRINCIPLES & OPERATIONAL MANDATE

rule 1.1: total plausible deniability

The Impossible Missions Force (IMF) operates beyond the scope of conventional diplomacy and jurisdiction. IMF agents possess no diplomatic immunity, legal defense, or official recognition. Disavowal is immediate, automatic, and absolute upon operational compromise

rule 1.2: the doctrine of minimal footprint

Operations must leave zero forensic, legal, or digital footprint. Infiltration, extraction, and asset recovery must occur without attribution to the IMF or its sponsoring government.

SECTION 1: CORE PRINCIPLES & OPERATIONAL MANDATE

rule 1.3: absolute mission supremacy

The Impossible Missions Force (IMF) operates beyond the scope of conventional diplomacy and jurisdiction. IMF agents possess no diplomatic immunity, legal defense, or official recognition. Disavowal is immediate, automatic, and absolute upon operational compromise

SECTION 2: BRIEFING & COMMAND STRUCTURE

rule 2.1: briefing transmission and verification

Mission briefings are delivered via secure, encrypted dead-drops disguised as everyday physical items (e.g., optical discs, phonograph records, modified smart displays). Access requires retinal, vocal, or cryptographic verification.

rule 2.2: the five-second self-destruct rule

Every transmission hardware module must self-destruct within exactly five (5) seconds of playback completion.

Destruction must completely incinerate internal memory boards and physical storage via pyrotechnic or thermite degradation.

SECTION 2: BRIEFING & COMMAND STRUCTURE

rule 2.3: operational hierarchy

The Secretary: Authorizes mission scope, resources, and operational deployment.

Field Team Leader (Lead Agent): Possesses absolute operational discretion on the ground.

Field Support: Specialists in systems penetration, logistics, and munitions operate under the direct authority of the Lead Agent.

SECTION 3: DISGUISE, SUBTERFUGE & INFILTRATION

rule 3.1: hyper-realistic mask fabrication

3D-scanned latex/silicone mask fabrication must only be deployed after full ocular, facial, and behavioral profile modeling of the target.

Voice modification patches must be calibrated using a minimum of 60 seconds of uncompressed audio samples from the subject before field activation.

rule 3.2: persona preservation

Agents assuming a target's identity must match physical posture, vocabulary, gait, and vital baselines. Breaking character in proximity to hostile assets without a secondary diversion plan constitutes grounds for immediate abort.

SECTION 3: DISGUISE, SUBTERFUGE & INFILTRATION

rule 3.3: environmental infiltration

When standard entry points are inaccessible, ingress through HVAC shafts, high-altitude low-opening (HALO) parachute insertions, or exterior structural rappelling via pneumatic/electro-adhesive gloves is authorized.

SECTION 4: TECHNICAL & PHYSICAL SECURITY COUNTERMEASURES

rule 4.1: vault & server clean-room standards

When infiltrating ultra-secure facilities (e.g., sound-, thermal-, and pressure-sensitive vaults):

Temperature Regulation: The operative must maintain body surface temperature within 1°C of ambient room settings.

Pressure & Acoustic Limits: Operatives must not contact the floor plane. Floor pressure variances exceeding 0.1 grams or acoustic spikes above ambient decibel floors result in automated facility lockdown.

Suspension Protocol: Rappelling wires must utilize high-tensile braided synthetic cord anchored to load-bearing structural joints.

SECTION 4: TECHNICAL & PHYSICAL SECURITY COUNTERMEASURES

rule 4.2: digital intrusions & air-gap exploitation

Systems isolated from external networks must be physically patched via dedicated local transceivers, spoofed terminal keypads, or direct optical fiber bridging.

rule 4.3: hardware scuttling

Any tool, terminal, mask printer, or drone left behind must be sanitized remotely or detonated via integrated micro-charges.

SECTION 5: COMBAT, EXTRACTION & HOSTAGE ENGAGEMENT

rule 5.1 – proportional engagement

Lethal force is authorized only to protect life or halt mass-casualty events. Civilian avoidance is mandatory.

rule 5.2 – ghost protocol

If the IMF is disavowed, formal command terminates. Operatives fall back to hidden caches and continue the mission independently.

rule 5.3 – rogue operatives

Traitors, syndicate brokers, and black-market arms dealers are marked for immediate capture or neutralization.

SECTION E: MISSION CLOSURE

rule 6.1 – safehouse sanitization

72-hour operational limit per site. Complete cryptographic data purge and chemical trace wipe required.

rule 6.2 – asset securement

Recovered weapons, keys, and cores must be locked in biometric cases and delivered directly to verified handlers.

rule 6.3 – radio silence

Absolute non-contact protocol remains active until authorized by central IMF recovery teams.
